

Assembly instructions for GPS adapter

Place the connection plug between intercom and helmet.
Connect the cable with the 3,5 mm jack plug with the navigation system.
If the navigation system uses a 2,5 mm jack plug outlet, use the included adapter.

As soon as the cable connections are made, the installation will be ready to be used.

To test the installation, switch the navigation system on and chose a medium volume for the announcements. Connect the helmet (headset). Start the intercom and also chose a medium volume. Start the ignition and initialise a language output at the navigation system.
If all connections are made correctly, you should be able to hear the announcement in an acceptable volume within your helmet. The volume can be adjusted at the navigation system.

All devices with a 3,5mm or 2,5mm stero/mono-plug can be connected.
